

BUILD A BROOMSTICK BASS

You will need: A broom A plastic bucket String Material for a bridge

1) Take a plastic bucket and make two holes about 6cm from the base for the broom handle to pass through.

2) Slide the bucket onto the broom, pass the string over the bucket and thread through the hole in the handle.

3) Tie a piece of string around the head of the broom.

4) Drill a small hole at the end of the handle and bang a small nail into the handle underneath.

5) Thread the string through the hole, pull very tight and tie off round the nail.

6) Add a bridge between the string and the bucket. This can be made cut from a thin piece of wood or plastic. Try to make it as thin as possible and the feet small.

Why not try different size buckets or some made from different materials?
